Treating depression in later life | The BMJ

Depression late in life is associated with serious morbidity and mortality, including suicide.³ The national service framework for older people targets stroke, falls, dementia, and depression, but only the first three seem to attract new funding or services commissioned by primary care trusts.

Treating depression in later life - PubMed Central (PMC)

Depression late in life is associated with serious morbidity and mortality, including suicide. ³ The national service framework for older people targets stroke, falls, dementia, and depression, but only the first three seem to attract new funding or services commissioned by primary care trusts.

Late life depression - Wikipedia

Late life depression refers to a major depressive episode occurring for the first time in an older person (usually over 50 or 60 years of age). Concurrent medical problems and lower functional expectations of elderly patients often obscure the degree of impairment.

Depression in Later Life | SpringerLink

The classification systems have traditionally viewed depressive symptoms and depression categorically (Baldwin 2014). There is no defined biomarker for depression; the diagnosis is based on a clinical interview, observation, and supplemental information from relatives and caregivers.
